FairBounty.fun

Complete User & Platform Guide

Before We Get Into It

FairBounty.fun is a Solana-based bounty platform where your on-chain reputation determines what opportunities you can access. The goal of this document is simple: walk you through everything — from connecting your wallet to understanding why your tier level actually matters.

---

1. What Is FairBounty?

FairBounty is a bounty board built on Solana. Projects post tasks, contributors complete them, and rewards are distributed based on community review — not a single person's preference.

But what separates it from other bounty platforms isn't just the mechanics. It's the reputation layer underneath everything.

> *Your reputation on FairBounty isn't just a number. It's the key that unlocks better bounties, more voting power, and higher earning potential.*

The Core Problem It Solves

Web3 bounty platforms have a trust problem:

- Fake contributors game submissions
- Quality work goes unrewarded
- Projects can't tell who's actually skilled

FairBounty's answer is a reputation system called FairScore — a score tied to your wallet that reflects your real contribution history. You can't fake it. You have to earn it.

---

2. Key Concepts

FairScore

FairScore is your on-chain reputation score. It's calculated automatically based on your connected Solana wallet's activity history. The moment you connect your wallet, FairScore fetches your score and assigns you a tier.

You don't manually update it. The chain does the talking.

BXP — Bounty Experience Points

BXP is the platform's internal reputation currency. Think of it as XP in a game — except here, it directly affects your earnings multiplier and voting influence.

Here's how you earn BXP:

- Profile setup — 100 BXP one-time welcome bonus
- Refer a Friend — 50 BXP for you AND your friend
- Submit Work — 25 BXP per bounty submission
- Win a Bounty — 100 BXP on top of the reward payout

> *You're automatically assigned a 1.25x BXP multiplier at Tier 2 (Explorer) when you first connect a wallet with existing on-chain history. That means every BXP you earn is multiplied — even from day one.*

---

3. FairScore Tiers

There are five tiers on FairBounty. Your tier affects two critical things: how much BXP you earn per action, and how much weight your community votes carry.

Tier	Label	BXP Multiplier	Vote Weight
🌱 Tier 1	Newcomer	**1x**	**1x**
🔍 Tier 2	Explorer	**1.25x**	**2x**
🛠️ Tier 3	Builder	**1.5x**	**3x**
⭐ Tier 4	Veteran	**2x**	**5x**
👑 Tier 5	Legend	**3x**	**8x**

Higher tiers don't just feel better — they compound. A Tier 5 Legend earns 3x the BXP from every action and carries 8x the voting influence of a Newcomer. That's the long game.

Tier-Gated Access

Some bounties require a minimum tier to participate. This isn't gatekeeping for the sake of it — it's how projects ensure their tasks reach contributors with a proven track record.

The better your reputation, the more doors open.

---

4. Getting Started

Step 1 — Connect Your Wallet

Go to fairbounty.fun and click Connect Wallet. The platform supports multiple Solana wallets:

- Phantom (most common — detected automatically if installed)
- Solflare
- Backpack
- Jupiter
- Glow

> *Tip: Use the same wallet you've been most active with on Solana. FairScore pulls your on-chain history to assign your starting tier — a wallet with more activity means a higher starting point.*

Step 2 — Set Up Your Profile

After connecting, you'll be prompted to set up your profile. Complete this — it's not optional if you want the 100 BXP welcome bonus.

Your profile has three tabs:

- Basics — Display name, profile picture, email, bio, location, and current employer
- Socials — Link your Twitter/X, GitHub, and other relevant accounts
- Skills — Tag what you're good at so the right bounties find you

Once your profile is complete, your BXP counter activates and you're ready to browse.

---

5. How Bounties Work

Finding a Bounty

Navigate to the Bounty Board from the main menu. Each bounty listing shows:

- Task description — what you're being asked to do
- Reward amount and type — what you'll earn if you win
- Submission requirements — what format or deliverable is expected
- Deadline — when submissions close
- Minimum tier — whether you're eligible to enter

You can bookmark bounties to come back to later.

Types of Tasks

Bounties cover a wide range of work:

- Content — threads, articles, explainers, documentation
- Creative — designs, memes, visuals
- Technical — development tasks, testing, auditing
- Community — engagement, moderation, onboarding

Pick tasks that match your actual skillset. Quality beats quantity when community votes determine the winner.

Submitting Your Work

When you're ready, submit your work directly through the platform. Each submission earns you 25 BXP regardless of whether you win — so there's value in participating even if you don't take first place.

Community Review

This is where FairBounty gets interesting.

Once the submission window closes, the community votes on the best entries. But not all votes are equal — higher-tier contributors carry more influence. A Tier 5 Legend's vote counts 8x more than a Tier 1 Newcomer's.

From the top-voted submissions, the client (the project that posted the bounty) picks the final winner.

> *This hybrid model — community ranking + client decision — means submissions are judged on both quality and relevance. Do good work. Make it easy for the client to choose you.*

---

6. Prize Types

FairBounty supports five types of prizes. Projects can choose which type fits their bounty:

Prize Type	Examples	Best For
Stablecoin	USDC, USDT	Predictable cash-equivalent rewards
SOL	Native Solana token	Ecosystem-native payouts
Memecoin	BONK, WIF, POPCAT	Community-driven, high upside
NFT / cNFT	NFTs, compressed NFTs	Collectible or access-token prizes
Collectible	Card packs, physical items	Unique or real-world rewards

Always check the prize type before submitting. If you're earning for income, prioritize stablecoin or SOL bounties. If you're a collector or speculator, memecoin and NFT prizes may have more upside.

---

7. Posting a Bounty

FairBounty isn't just for contributors. If you're a project or founder, you can post your own bounties.

Navigate to Post Bounty and:

1. Create your task — write a clear description of what you need
2. Set the reward — choose the amount and prize type
3. Define submission requirements — tell contributors exactly what to deliver
4. Choose your selection method — community review, client picks, or both

> *Write clear briefs. Vague bounties attract vague submissions. The more specific your requirements, the better quality work you'll receive from the community.*

---

8. Building Reputation Over Time

The long game on FairBounty is straightforward:

- Submit quality work consistently
- Earn BXP across multiple bounties
- Participate in community reviews to earn review BXP and build relationships
- Refer other contributors (50 BXP each, mutual)
- Stay active to accumulate toward a potential $BOUNTY FairDrop

As your BXP grows, your tier advances. As your tier advances, your BXP multiplier increases — which means every future action earns you more. This is the compounding effect that separates early, consistent contributors from everyone else who shows up late.

Final Word

FairBounty's thesis is simple: reputation should mean something. Not just as a badge, but as actual leverage — access to better opportunities, more influence in community decisions, and higher earnings over time.

If you're a contributor serious about Web3, it pays to build your on-chain reputation on platforms like this early. The architecture rewards the people who show up first and stay consistent.
